

Speak. Analyze. Improve.

The fastest path to becoming a confident, stage-ready public speaker and hackathon pitcher — powered by AssemblyAI Voice Agents.

 AssemblyAI Voice Agent API

 Universal-3.5 STT & Keyterms

 AssemblyAI LLM Gateway

 Hackathon Pitch Training

Great Ideas Die from Poor Delivery

73%

Glossophobia

Nearly three in four people experience public speaking anxiety. For founders and hackathon teams, this anxiety destroys high-stakes pitches.

\$300/h

Coaching Cost

Professional speech coaching is cost-prohibitive. Books and passive YouTube videos give advice, but they never force you to open your mouth and speak.

0s

Practice Under Pressure

Most speakers rehearse in their heads without a stopwatch. Under real judge pressure, they ramble, exceed time limits, and bury their demo.

The Deliberate Practice Training Loop

1. Timed Spontaneous Takes

Pick a topic or pitch your custom project. Practice under strict 60s, 180s, or 300s timers with browser-native microphone capture.

2. Objective Signal Analysis

Deep speech metrics: clarity, filler rate, signpost structure, concrete examples, and topic relevance scoring based on what you actually said.

3. Live Voice Coach Dialogue

A real-time voice agent powered by AssemblyAI conducts a natural call, interrupts gracefully, and recites an improved version of your speech.

Hackathon Pitch Training Mode

Built specifically for hackathon participants and startup founders preparing to pitch judges.

Pitch Length Formats

- **1–Minute Elevator Pitch:** Hook, problem, solution, and impact.
- **3–Minute Standard Pitch:** Problem depth, solution, demo story, and future vision.
- **5–Minute Presentation:** Full architecture walkthrough, traction, and business case.

Judge–Grade Evaluation Metrics

- **Problem & Solution:** Value clarity and pain-point identification.
- **Pitch Structure:** Hook → Problem → Solution → Demo → Impact.
- **Demo & Evidence:** Technical feasibility and live demo presence.
- **Pacing Against Clock:** Words–per-minute calibration under stress.

Deeply Powered by AssemblyAI

Voice Agent WebSocket API

- Full-duplex bidirectional 24kHz audio via AudioWorklet.
- Live interruption handling (pauses instantly when user talks).
- AI roleplay as a supportive hackathon judge or mentor.

Universal-3.5 STT Engine

- **Keyterms Prompting:** Custom project names and tech terms recognized with high precision.
- **Disfluency Detection:** Captures fillers ("um", "uh") for accurate fluency analytics.
- **Entity Detection & Diarization.**

AssemblyAI LLM Gateway

- Intelligent post-speech critique generation.
- Custom speaking techniques mapped directly to weakest areas.
- Fallback to rule-based speech signal engine if offline.

End-to-End Application Flow

Frontend & Capture

- **Next.js 16 + React 19 + TypeScript:** Lightning-fast SSR & static rendering.
- **AudioWorklet Node:** Streams clean PCM chunks without blocking the UI thread.
- **Zero-Exposure Security:** Tokens minted server-side via `/api/voice-token`.

Automated Quality & Verification

- **12 Automated Unit Tests:** Covering speech signals, gibberish detection, and pitch metrics.
- **Zero Lint Errors:** Fully compliant with strict React 19 compiler rules.
- **Production Build Verified:** All 14 routes compiled and deployable.

Gamified Retention & B2B Expansion

Points Economy

Users earn practice points per session and level completion bonuses. Points unlock longer talk times (10–20 min) and higher keyterm allowances.

Keyterms as a Resource

AssemblyAI keyterms have hard capacity limits. Vocalis packages keyterm allowances into Free, Points-unlocked, and Pro tiers.

B2B Pitch & Sales Training

Expand from hackathon teams into corporate sales pitch training, university debate clubs, and accelerator demo day preparation.

Ready to Elevate Your Voice?

Built with passion for the AssemblyAI Voice Agent Hackathon.
Deliberate practice makes extraordinary speakers.
